***** HIGH RISK for Mixed Dry/Wet Lightning this weekend across far Northwest Nevada and parts of the Central Idaho Mountains *****

Drier weather may briefly push into the western/northern side of the Great Basin on Friday. Northern and Western Nevada will have to be monitored for any lightning holdovers.

However, just as quickly, another monsoonal surge of moisture is expected to push up from Arizona and spread northward across much of the Great Basin this weekend, lingering into early next week. Storms that move into western and northern Nevada and southwest and central ID may be on the drier side and in areas that have not had as much moisture as areas further east and south. Also, after a couple days of drier weather, fuel moisture will decrease.
